CPT® Code 67255—Repair Procedures on the Posterior—
□Rectocele:Surgical repair of a rectocele after a posterior repair or posterior colpopoierorrhaphy. The rectocele is repaired through the vagina. The procedure is similar to an anterior repair. The cut is made on the back wall of the vagina and the rectum is pushed back into place.

Vaginal Hysterectomy Anterior/Posterior Repair

A Posterior Repair (Rectocele) is a bulging of the rectum into the vagina. It happens when the tissues that support the rectum and vagina are weakened and torn. Vaginal childbirth, chronic constipation, and heavy lifting all increase your risk of rectocele, as they can damage the tissue that supports the rectum and vagina. Before your Procedure

Posterior Repair (Rectocele) — St. George Surgical Center

A posterior repair is usually performed under a general anaesthetic. The operation usually takes about half an hour. Your gynaecologist will make a cut in the back (posterior) wall of your vagina so they can push your bowel back into place. They will then use stitches to tighten the support tissues along the length of the back wall of your vagina.
