A Guide to Dental Implants - Dental Guide

A dental implant is an artificial replacement for a tooth root, usually made from titanium. There are many different implant systems available and when competently used they all deliver a highly reliable form of treatment. The main aim during the placement of any implant is to achieve immediate close contact with the surrounding bone.

A Patient's Guide to Dental Implants: Amazon.co.uk ...

Patients must understand the dental implant placement process. First, the patient meets with the dentist to discuss whether an implant offers the best solution. If it does, the dentist places the implant in the jawbone during the next visit, and patients find this procedure to be pain free and easier than they expected.
