Session 39. Should Type 2 Diabetes Take Insulin? - Dr. Bernstein's Diabetes University *Diabetes The New Type 2*

Type 2 diabetes is a common condition that causes the level of sugar (glucose) in the blood to become too high. It can cause symptoms like excessive thirst, needing to pee a lot and tiredness. It can also increase your risk of getting serious problems with your eyes, heart and nerves. It's a lifelong condition that can affect your everyday life. You may need to change your diet, take medicines and have regular check-ups.

Type 2 diabetes - NHS
When you have type 2 diabetes, your body still breaks down carbohydrate from your food and drink and turns it into glucose. The pancreas then responds to this by releasing insulin. But because this insulin can't work properly, your blood sugar levels keep rising. This means more insulin is released.
