What is Four-Handed Dentistry? | Harris School of Business

Four-handed dentistry refers to a dental technique whereby a dental assistant or dental hygienist works alongside a dentist at the same time. This method was instituted to quicken the process and reduce fatigue both for the patient and the dental professionals. Shortening the time of any given dental procedure can very often raise the quality of the work.

What Is Four-Handed Dentistry? (with pictures)

The benefit of Four-Handed Dentistry. In four-handed dentistry the dental nurse/surgery technician provides close support for the dentist, sitting on the opposite side of the patient. The actual position depends upon the operative procedure being performed, and upon the dentist wishes. The surgery technician places all new instruments firmly into the dentist's hands, ensuring that they are the correct way round for use.

Four-Handed Dentistry - Healthsoothe: Health And Dental Care

The definition of 4-handed dentistry boils down to 2 hands of a well-trained dental assistant helping the 2 hands of a dentist in dental procedures to decrease time of production and increase efficiency. 4-Handed Dentistry has been around for over 60 years, yet is still the best way to run your practice on time and increase production.

The Importance of 4-Handed Dentistry - Square Practice

Four-Handed Dentistry: Instrument Transfer The efficient exchange of instruments between the operator and the dental assistant is fundamental to the facilitation of an efficient and stress-free dental practice.

Four-Handed Dentistry: Instrument Transfer

handpieces, air/water syringe, ultrasonic scalers) and prioritize hand instruments and minimally invasive/atraumatic restorative techniques. If aerosol-generating procedures are necessary, take precautions to minimize exposure (e.g. four-handed dentistry, high evacuation suction, dental dams, limited personnel for procedure support).
