Pressure in Gases | Teaching Resources

Step 1: Introduce the concept of states of matter by showing the StudyJams! video on Matter from the Solids, Liquids, and Gases: A StudyJams!Activity. Step 2: Have students stand up by their desks. Tell them they represent water molecules transitioning through different states of matter. Explain that when you call out a state of matter, you want them to move like the molecules at that state.

The teacher's notes indicate that in this context the precautionary principle dictates that if the effects of a human-induced change would be very large, those responsible for the change must prove that it will not do harm before proceeding. In this question proceeding would be continuing to emit greenhouse gases.
