This research can help provide insight into how pre-existing immunity affects the production of antibodies after infection and vaccination. Universal vaccines would have to use parts of the flu virus that stay the same over time, or are conserved, so that antibodies will work against the virus as the rest of it changes year after year.

Infection and Immunity — An overview. The ASI Infection and Immunity Special Interest Group was established in 2009 by Dr. Ashley Mansell (Monash Institute for Medical Research), with the aim of providing a forum for ASI researchers who have a special interest in infectious diseases. The I&I SIG organizes a one-day workshop on the Sunday of each national ASI Annual Scientific Meeting, with the primary objectives of providing speaking opportunities to early career researchers (PhD students, ...

Infection and Immunity® (IAI) provides new insights into the interactions between bacteria, fungi, and parasites and their hosts. Specific areas of interest include host cellular and immune response to microbes, molecular mechanisms of action of beneficial microbes or host-associated microbial communities, microbial pathogenesis, virulence factors, experimental models of infection, host resistance or susceptibility, and the generation of innate and adaptive immune responses.

Abstract. Experimental evidence in the last decades show that iron is a fundamental element for normal development of the immune system. Its deficiency affects the capacity to have an adequate immune response. The role of iron in immunity is necessary for immune cells proliferation and maturation, particularly lymphocytes, associated with the generation of a specific response to infection.
