A bulge or split through the upper sidewall and/or shoulder area. To search into or examine thoroughly will reveal the separation. This may be evident by a spot in the tread that is worn. How to Photograph Claimed Defect

Guide for Photographing Defective Tires

Radial Tire Conditions Analysis Guide Each condition is defined along with the available Ford Tire Condition Code and provides examples of warrantable versus non-warrantable tire conditions. This guide has been developed for Ford, Mercury and Lincoln Dealers to assist them with administering the Ford Tire Warranty. This guide is not intended as ...

Tire Condition Guide - download.truyenyy.com

The purpose of this guide is to provide all Ford, Mercury and Lincoln Dealers with the necessary information to determine if a specific tire condition is warrantable or not. Effective with model year 2001 vehicles, Ford Motor Company warrants the original equipment tires for all passenger cars and light trucks (up to and including F-550 series).

Tire Conditions Guide for Passenger Cars and Light Trucks

Bead chafing can occur when mounting a tire on a dirty or mismatched rim, or when the tire is in an overloaded or under-inflated condition. A bent or deformed bead usually occurs when the tire is improperly stored, or excessive stress is applied to the bead area during mounting.

TIRE INSPECTION CHART - Maxxis

It depends not only on which tyres your car is using, but how you're driving, the condition of the roads you've used and how well you're looking after the tyres themselves. However, for general driving we'd expect you should be able to get 20,000 miles from a set of four without much fuss.

Car tyres - your ultimate guide | Parkers

Checking Your Tires for Wear You should check your tires for wear at least once a month and before and after long trips. To determine whether you need to (a) buy new tires, (b) have your wheels balanced, (c) add air into your tires, (d) have your wheels aligned, or (e) change your driving habits, simply read your tire treads for clues.

Checking Your Tires for Wear - dummies

Tire Feathering The indicator of excessive positive or negative toe angle is a tire feathering or scuffing that can be detected by stroking your fingertips across the edge of each tread bar or tread block. A feather edge on the inside of the tread bar indicates excess toe-in, while a feather edge on the outside of the tread bar indicates toe-out.

Understanding Tire Wear | Know Your Parts

Inspect the tyre thoroughly, checking the tread and sidewall for signs of any irregular wear or damage. Below we illustrate what to look out for in your visual examination of the tyre and we give possible reasons for the fault. Tyres can become unserviceable due to a number of reasons. Rarely is this because of faults in manufacture.

Condition and Faults | Maxxis Tyres UK

Like the area between the tread blocks, minor cracking is normal due to weathering but cracks exposing inner tire layers are a serious condition requiring tire replacement. **Step 3: Check for tread separation.** On tires with degrading rubber, the tread can separate from the body of the tire.

How to Do a Tire Safety Inspection | YourMechanic Advice

How to check tyre tread depth – the 20p test The 20p test is a simple, quick and easy way of checking the tyre tread of your car's wheels. Just take a 20p coin and insert it into the tread grooves on the tyre. If you can't see the outer band on the coin, your tyres are above the legal limit.

Tyre tread depth and tyre safety checks | RAC Drive

Tire selection guide - Tire selection should be based on track conditions and will greatly affect your car ' s performance. In general, tires with large spikes should be chosen for tracks with loamy, fluffy, or wet dirt. Soft compound tires with small pins should be used for hard-packed, dusty, or slick tracks.
